Final Images

Journal

- I definitely should have started this earlier because I know I will enjoy this.
- My dad is a coffee fanatic so he will love this too!
- I am going to start simple and then mess around more at the end to get a hang of it.
- The first mug wasn't too bad, I just needed to figure out the steps for the follow me. This was the most confusing part. Now that I know my best method with follow me I think I will be able to make more interesting cups.
- I am so confused about the handle my brain is not comprehending this.
- I am going to watch some youtube tutorials because this is not clicking for me.
- Everytime i try to follow me around for the handle it says I cant do it for the object but it works half the time. Crashing out.
- Okay I found some fun ways to make them more interesting by moving the handle once its connected, makes it more geometric and cool.
- I wonder if these will have trouble printing though.
- I have a feeling before I print whatever design I will make some of the sides thinner, although I think a thick rimmed cup could be pretty interesting.
- I really liked the tapered kind of mug. I find myself leaning towards those even when picking out mugs at stores and in my home.
- I think my flared design will be really cool. I like the idea of having a shorter espresso cup too so it fits under the portafilter on an espresso machine.
- I am planning on printing Cup 8 with some alterations on Monday or Tuesday for reiteration on Wednesday.
- Overall I think the most challenging aspect of this was creating the handles.
- Printed the cup, but the middle part caved in so i am going to have to change up my design. I am also going to add more sides to the circles and arc so it is thicker.
- I chose teal this time for the color and now am waiting for it to finish printing.
- For some reason the inside of the cup was more filled in than I anticipated.
